Project Rubric

Your project will be evaluated by a Udacity code reviewer according to the [Build a Portfolio Site project rubric](#). Depending on your background knowledge of HTML and CSS, you may not need to complete all lessons to build this project. To evaluate what you'll need to know, start by downloading the mockup we've provided, and review the rubric. Be sure to follow the project rubric closely when designing your page.

Development Strategy (How Do I Complete this Project?)

All of the skills you'll need to help you build this can be found in the lessons in this part of your Nanodegree program. After reviewing the rubric above, feel free to begin the workflow:

1. Download and review the [design mockup](#) (also at the very bottom of this page under **Supporting Materials**).
 - There is *no starter code provided* for this project! Recall the **Animal Trading Cards** exercise earlier in this program. Think about how you had customized that page to look the way you wanted it to -- how you *recreated* that layout with your own code and style
 - Note that ultimately, the colors and overall design are just general guidelines! As long as you fulfill the rubric items noted above, you will find success with this project. In the past, students have found it helpful to begin building the site to look as close to the provided mockup (before customizing). Remember: in the end, this is *your portfolio* to showcase!
2. Identify the various boxes you will need to build in order to recreate this design.
 - What individual blocks/boxes make up the mockup? That is, what are
